

DISCRETE MATHEMATICS IN COMPUTER SCIENCE

**HSIEN-CHIH CHANG
JANUARY 14, 2022**

ADMINISTRIVIA

- Homework 1 due today
- Homework 2 out today
- No work session next Monday (MLK day)

VARIOUS PROOF TECHNIQUES

PROOF BY IF AND ONLY IF

To prove **P** if and only if **Q**:

(**P** implies **Q**) and (**Q** implies **P**)

(**P** implies **Q**) and (\neg **P** implies \neg **Q**)

Reductio ad absurdum, John Pettie, 1884

A SET OF POINTS X IN THE PLANE ARE IN CONVEX POSITION IF AND ONLY IF NO 3 POINTS FORM A TRIANGLE THAT CONTAINS ANOTHER POINT.

EXERCISE

PROOF BY CASES

Split **P** into cases that are exhaustive:

P if and only if P_1, P_2, \dots, P_k

$(P_1, P_2, \dots, P_k \text{ is TRUE})$

implies (**P** is TRUE)

Reductio ad absurdum, John Pettie, 1884

**EVERY 5 POINTS IN THE PLANE MUST CONTAIN A
CONVEX QUADRILATERAL/4-GON.**

**HAPPY ENDING
PROBLEM**

PROOF BY COUNTING

Constructs sets and compare their sizes.

- Sum principle:

- $|P_1 \sqcup P_2 \sqcup \dots \sqcup P_k| = |P_1| + |P_2| + \dots + |P_k|$

- Product principle:

- $|P_1 \times P_2 \times \dots \times P_k| = |P_1| \times |P_2| \times \dots \times |P_k|$

Reductio ad absurdum, John Pettie, 1884

**BUBBLESORT CORRECTLY SORTS AN ARRAY $A[0..n-1]$
IN AT MOST n^2 STEPS.**

BUBBLESORT($A[0..n-1]$):

for i from 1 to n-1:

for j from 1 to n-1:

if $A[j-1] > A[j]$:

swap $A[j-1]$ and $A[j]$

return $A[]$

EXERCISE

**BUBBLESORT CORRECTLY SORTS AN ARRAY $A[0..n-1]$
IN AT MOST n^2 STEPS.**

BUBBLESORT($A[0..n-1]$):
 for i from 1 to $n-1$:
 for j from 1 to $n-i$:
 if $A[j-1] > A[j]$:
 swap $A[j-1]$ and $A[j]$
 return $A[]$

EXERCISE

APPLICATION

FRIENDSHIP THEOREM.

Every party of 6 must have either 3 people who are friends, or 3 people who are strangers with each other

**How many people do you need to
guarantee a group of
mutual friends/strangers of 4?**

NEXT TIME.

LIFELINE OF A COMPUTER SCIENTIST: INDUCTION.
